The bronze that is presented on our cover is entitled "Of One Spirit." It is the work of Dr. Robert Taylor. Considered America's finest wildlife sculptor, Dr. Taylor's work resides in the permanent collections of three U.S. Presidents. The original bronze is displayed in the lobby of the ASP offices.

OUR QUEST

INNOVATIVE DESIGN

FLAWLESS FUNCTION

UNPARALLELED SERVICE

In the demanding world of law enforcement, there is little room for error. Performance is paramount. Failure is not an option. Among the men and women of this specialized profession, the name ASP is synonymous with quality. These are individuals who place their personal safety at risk each day in the protection of others. That these dedicated men and women prefer ASP products above all others is something of which we are extremely proud.

For over three decades, the distinctive ASP insignia has stood for innovative design, flawless function and an unparalleled standard of service.

Today, ASP manufactures five distinct categories of products. Each is unique . . . the result of cutting edge design, advanced manufacturing technologies and exhaustive field evaluations. This is a product line so advanced that it is protected by over 100 Patents.

For more than a quarter century, the ASP Eagle has reflected an uncompromising standard of craftsmanship. Throughout the world, ASP remains the first choice of quiet professionals. In this catalog, you will find products of distinction built to a singular standard of quality. For those who cannot afford less. ASP. . . protecting those who protect.

SELECTING YOUR ASP BATON

Eighty-eight models of ASP Batons assure the perfect match between product and mission. From Locking System to Length, you will find an ASP design that fits your specific requirement. Each series is available with a Grip, Shafts and Attachments that will make your job safer.

A LOCKING SYSTEM

Choose between the proven excellence of the original Friction Loc or the simplicity and reliability of the self-closing LeverLoc.

B LENGTH

16, 21 and 26 Series batons allow you to select the compromise between ease of carry and impact potential that best fits your needs.

C GRIP

The cushioned hold of Foamed Vinyl, the molded-on durability of DuraTec and the increased retention of Wavemaster provide three distinct, yet equally effective grips.

D SHAFTS

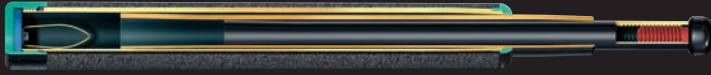

The portability of Airweight, low profile of Black Chrome, brilliance of Chrome and corrosion resistance of Electroless make it possible to match your baton to the operational environment.

E ATTACHMENTS

Whether improving retention, increasing striking potential or adding auxiliary features to the ASP Baton, all attachments are an integral part of the ASP system. Each is compatible with over three million ASP Batons in use throughout the world.

CHROME	FC	DC	WC	
ELECTROLESS	FE	DE	WE	

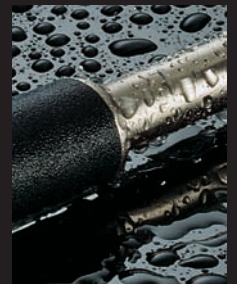

Airweight offers a 45% weight reduction with 98% of the striking potential of steel.

Black Chrome provides the most durable and corrosion resistant black baton finish available.

Chrome delivers a high luster finish for increased visibility under low light conditions.

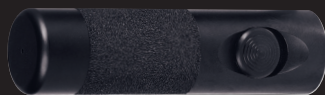

Electroless is the most corrosion resistant finish. It is well suited to high humidity environments.

THE CLASSIC LOCKING SYSTEM

The ASP Friction Loc Baton is the most tactically sophisticated impact weapon currently available to law enforcement personnel. Tested by the most elite federal teams, the Friction Loc has proven itself “virtually indestructible.” This is the first choice of the world’s most tactically advanced law enforcement agencies.

Easily carried and readily available, ASP Friction Loc Batons have an incredible psychological deterrence and unparalleled control potential. The premium materials, exceptional workmanship and flawless function of the ASP Friction Loc set it apart from all others in quality, durability and performance. In every detail, these are the finest impact weapons produced.

FRICTION LOC

FRICTION LOC SERIES

On the street, there can be no tolerance for second best. It is here that the nation's most respected and tactically advanced law enforcement agencies trust their safety to ASP Friction Loc Batons. An intermediate force system of uncompromising quality from a firm with a long tradition of agency service. Under

the most severe tactical conditions, Friction Loc Batons have proven themselves virtually indestructible. Easily carried. Readily at hand. Low profile. Improved public image. Unparalleled psychological deterrence. Devastatingly effective. ASP... when you cannot afford less.

LEVERLOC SERIES

Elegantly simple. Incredibly strong. Easily carried. Rapidly deployed. A new twist for retraction. A new standard for convenience.

Four heat treated levers assure extension. Two sets of opposing internal lugs provide a positive lockout. A design that is both stable and secure. A baton that is both effortless and effective. Eccentric retention grooves allow opposing locking lugs to cam free. The baton is closed with a simple twist.

Forged from 4140 steel. Compatible with all existing ASP Baton caps and accessories. Fits all Tactical Baton scabbards.

The LeverLoc Baton retains all that you have come to expect from ASP. Premium materials, exceptional workmanship, flawless function. This is a baton that combines an incredible psychological deterrence with unparalleled control potential. Quality, durability and performance in every detail.

COMBINED DEFENSE

Fusion Batons combine two essential law enforcement tools into a compact, easily carried, readily deployed tactical package. An ASP Expandable Baton is mated with a low profile OC dispenser or high intensity variable beam LED flashlight. The multi-functional design provides improved control and enhanced handling characteristics.

FUSION BATONS

- A** Precise Dispersion
- B** Foamed Vinyl Grip
- C** 6061 T6 Frame
- D** Activation Indicator

FUSION OC | 52421

Note: Series 26 Scabbards are recommended for Fusion Batons.

MILLER BEER

FUSION SERIES

The Fusion OC employs straight line activation to place a 10% concentration of pepper spray directly on target . . . even in the dark. Replaceable Heat Inserts are custom formulated. They dispense Oleoresin Capsicum (two million Scoville Heat Units) in a cone shaped spray. Inert (Test) Inserts are ideal for training simulations. A Conversion Tube allows the use of Palm Defender Inserts.

The Fusion LED provides a pre-focused penetration beam of incredible brightness. The combination of an easily carried baton and high intensity LED light provides a great tactical advantage. Rotary switch activation is positive, yet secure against inadvertent contact. At the same time, the baton retains all of the size, weight and striking advantages of other ASP expandables.

FUSION OC | 52421

FUSION LED | 52425

Note: Series 26 Scabbards are recommended for Fusion Batons.

WRIST STRAP CAP | 52914

WRIST STRAP CAPS are designed for mounted units. The stainless steel cap incorporates a closed loop parachute cord wrist strap and adjustable ball slide.

BLACK | 52923

ELECTROLESS | 52922

BREAKAWAY window breakers can be attached between the cap and handle of any ASP Baton. They add less than .75" to the baton length. The three ceramic pins of the BreakAway provide instant entry through tempered glass. For emergency entry through a windshield, punch a large circular pattern with the BreakAway. The ceramic pins will penetrate the glass, making it possible to break out the perforated area.

TACTICAL MIRRORS are easily carried in the pocket and may be rapidly attached to an ASP Baton. They are ideal for drug search and room clearance operations. The mirror allows an officer to see around corners without presenting a target. In addition, it is an ideal means of looking into areas without risking exposure to hidden needles. The Tactical Mirror is available individually or with a fitted case.

MIRROR | 52471

MIRROR & CASE | 52470

TACTICAL TRIAD | 55601

TACTICAL TRIAD LED lights produce brilliant white illumination. They provide both a room filling halo and a penetrating central beam of incredible brightness. The rotational activation system for each light is positive and quiet.

(SEE PAGES 104-105)

POWER CELLS (2) | 53023

TACTICAL DEFENDER | 52854

TACTICAL DEFENDER OC attachments combine the straight line activation system of the Defender with the proven dependability of the ASP Tactical Baton. Heat (OC) and Test (Training) Inserts for the Tactical Defender are replaceable. Conversion Tubes allow Palm Defender Inserts to be used in the Tactical Defender.

(SEE PAGES 90-91)

SECURE RETENTION, INSTANT ACCESS

Protection. Portation. Presentation. The three criteria of any baton scabbard. Each carrier must define a compromise between security and speed of presentation. It must provide a level of protection without compromising access. The case must secure the baton without hindering rapid deployment.

ASP Scabbards secure a baton during transport. They allow a firm grip and rapid presentation. Each design is fabricated for a specific purpose. Designs so unique that they are patented. Under the most severe tactical conditions, they have no equal.

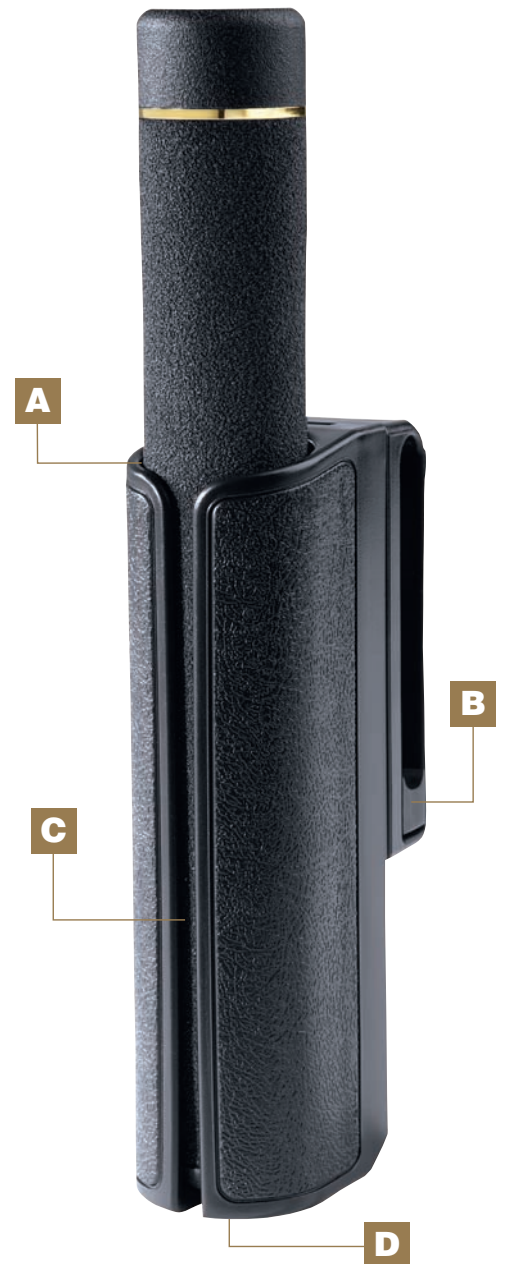

- A** Spring Tempered Retention Clip
- B** Adjustable Belt Loop
- C** Baton Breakout
- D** Tip Retention Base

21 SIDEBREAK SLIDE | 52432

*Designates a
Rotating Scabbard.*

BATON SCABBARDS

A retracted or expanded baton may be rapidly presented, yet it is securely retained during dynamic confrontations.

SIDEBREAK SCABBARDS

The SideBreak Series is the foundation of the ASP gallery of baton scabbards. The rotating SideBreak Slide swivels to 12 distinct positions or may be locked in place on the duty belt. A retracted or expanded baton may be rapidly presented, yet is securely retained during dynamic confrontations. Expanded batons may be presented out the side of the carrier.

Rotate the belt slide to reveal the hex key adjustment tool.

21 SLIDE | 52432

Slide Scabbards are the duty standard for expandable batons. Available in four finishes: Black, Basketweave, Ballistic and ASPtec.

21 CLIP | 52437

Clip Scabbards fit military or duty belts. They adjust from 1.25 to 2.25 inches.

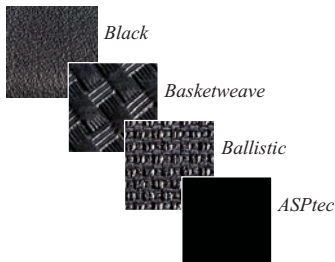

Paddle Scabbards combine a SideBreak carrier and adjustable Paddle. The carrier can be locked in five distinct positions.

21 PADDLE | 52436

MOLLE Scabbards attach to military or police vests, rotate to 12 positions and can be locked in place.

21 MOLLE | 52445

		SIDEBREAK	16	21	26

MOLLE	Black		52245	52445	52645

FEDERAL SCABBARDS

A compact, reduced form carrier for the Tactical Baton. The Federal Scabbard is designed for those officers who prefer a closed front ASP case. The carrier adjusts to a variety of belt widths from 1.25 to 2.25 inches. It will retain a retracted or extended ASP Baton.

The double lock pin of your handcuff key can be used to dislodge the hex key adjustment tool.

21 SLIDE | 52438

Slide Scabbards are secure and lightweight. They rotate to 12 distinct positions.

21 PADDLE | 52439

Paddle Scabbards include a Federal carrier and adjustable Paddle. They can be locked in five distinct positions.

DUTY SCABBARD

These “soft” design carriers are ideal for investigative and security personnel. The scabbard snaps onto the belt and securely retains a retracted or expanded ASP Baton. It can also hold a Triad light in a lens up or lens down configuration.

21.3 DUTY | 32432

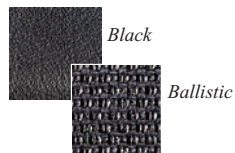

COMBO CASE

This combination carrier holds an ASP Baton or Triad light together with a pair of ASP Chain or Hinge Handcuffs. A spare key is included with the case. The snap-on design is low profile and convenient.

A TOTAL SYSTEM

ASP Batons and Scabbards may be rapidly serviced or repaired with a series of Maintenance Kits.

Cutaway batons and scabbards clarify the operational principles of ASP tactical designs.

Instructor Folios illustrate the relationship between various batons in the ASP family. They explain differences in Locking System, Length, Grip and Shaft.

18K Gold ASP Presentation Batons and Prestige Cases are ideal as awards, for gifts and at recognition or retirement ceremonies.

SELECTING YOUR ASP RESTRAINT

It has been called the greatest handcuff advance of this century. The ASP Restraint System. A fusion of innovative design, advanced materials and cutting edge technology. The result of an exhausting eight year design effort. A system with real world features. A Restraint Series that has set a new standard for safety and security.

A BOW

Whether in high carbon steel or forged aircraft aluminum, the high contact bow has fully radiused edges, deep set teeth and the largest span of locking positions in the industry.

B LOCK SET

Tactical (one pawl), Security (two pawl), European (three pawl) and Training (slip pawl) Lock Sets are color coded and interchangeable. Lock assemblies are extremely smooth with dual-sided stainless steel keyways and high visibility double lock indicators. Both double and single locks release by turning the key in one direction.

C MODEL

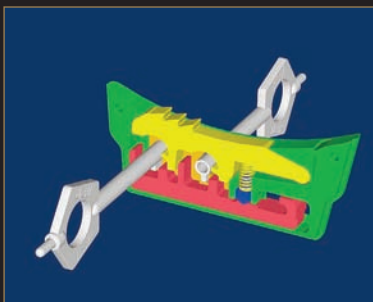

Chain, Hinge and Rigid Restraints are available in both steel and aluminum configurations. Chain and Hinge Identifier Restraints are stocked in six standard colors. All ASP Restraints are produced with one, two, three or slip pawl Lock Sets.

D FRAME

A hardened stainless steel core is overmolded in virtually indestructible polymer to form the frame of ASP Handcuffs. They are lightweight with permanent color, radiused edges and Flex Frame Technology.

E ENGRAVING

The laser engraved serial number of ASP Handcuffs also identifies the date of manufacture. Agency or individual identification can be engraved on the bow or frame.

Replaceable Lock Sets are double sided.

LINEAR AND LATERAL MOBILITY

ASP Chain Handcuffs provide a major advance in both the design and construction of wrist restraints. Frame geometry is the result of extensive computer modeling and simulation analysis. Strength potential has been maximized through use of an interlocking, unitized frame. The cuff structure is forged from high strength stainless steel on custom built, high speed, progressive dies. Each restraint is then overmolded with ordnance grade polymer under 75 tons of pressure. The Lock Assembly is unitized and replaceable.

- A** Flat Contact Surface
- B** Keyway on each Side
- C** Replaceable Lock Sets
- D** Hand Welded Stainless Chain

CHAIN HANDCUFFS

CHAIN HANDCUFFS | 56101

CHAIN HANDCUFF SERIES

ASP Chain Handcuffs were designed in the field. Input came from officers and instructors in over 80 nations where ASP currently conducts training. As a result, this ASP design incorporates the practical features most requested by officers on the street. A stainless steel handcuff that weighs less than standard designs.

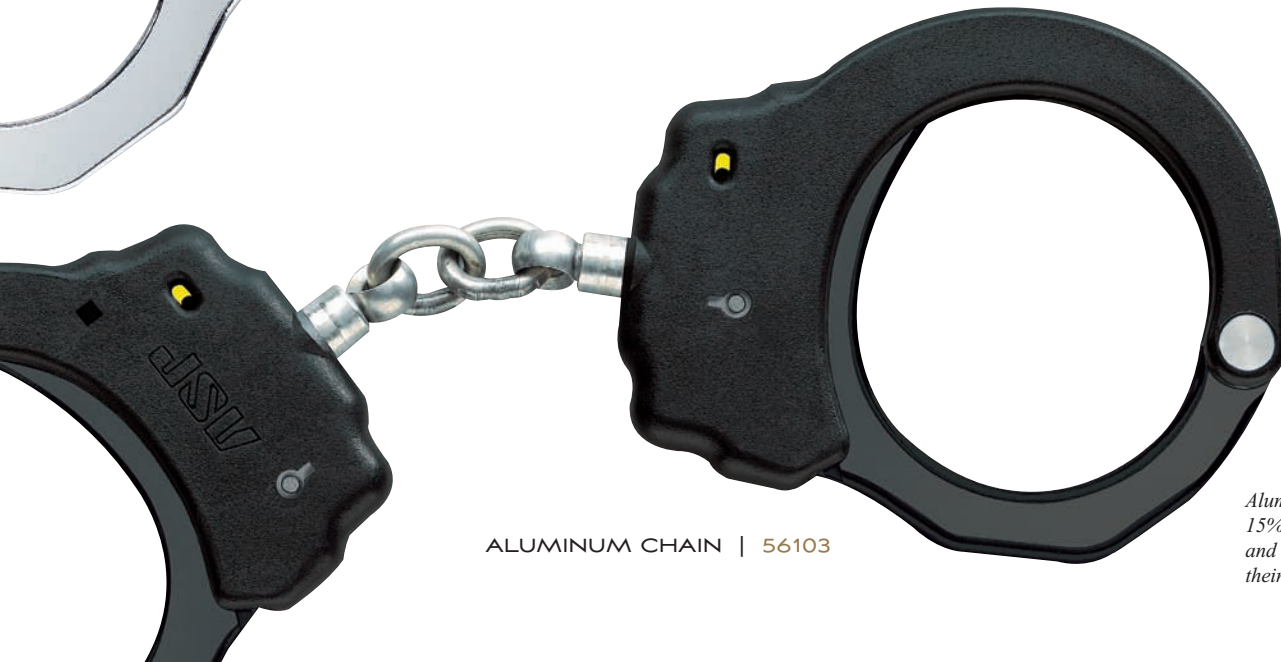

Chain cuffs are flexible and more easily applied during a confrontation. A flat contact bow improves application.

Complex “keyhole up” training procedures are no longer necessary. There is a keyway and double lock slot on each side of each restraint. A double lock warning bar is readily visible. Both double and single locks are released by turning the key in a single direction.

The frame geometry, deep set teeth and precision smooth action eliminate the need for backloading. Lock Assemblies are readily replaced.

STEEL CHAIN | 56101

ALUMINUM CHAIN | 56103

Aluminum handcuffs weigh 15% less than steel models and are distinguished by their black bows.

TACTICAL (1 PAWL)

ASP Tactical Handcuffs feature a replaceable Lock Set.

SECURITY (2 PAWL)*

The two pawl divider plate design is virtually impossible to pick.

** Provided with proprietary handcuff key.*

EUROPEAN (3 PAWL)

Three independent pawls provide an extra measure of security against shimming.

MODEL	PAWL	COLOR	STEEL BOW	ALUMINUM BOW

DUTY CASE | 56131
SEE PAGES 52-55

LINEAR MOBILITY, LATERAL RIGIDITY

Hinge Handcuffs provide increased control of violent subjects. Because of their conical bow geometry, the cuffs fit large subjects, yet still control small wrists. They are easily carried, rapidly applied and have a clean, smooth, finished appearance. The four point connection system allows the cuffs to fold flat and yet be worn over belts of various thicknesses. Because connecting rivets are integral with the side plate, they cannot be driven out.

HINGE HANDCUFFS

- A** Radiused Edges
- B** Recessed Keyway
- C** High Visibility
Double Lock Indicator
- D** Four Point Hinge

HINGE HANDCUFFS | 56111

HINGE HANDCUFF SERIES

As with all ASP products, the design for these Hinge Handcuffs originated in the field. ASP Trainers surveyed instructors and officers throughout the world. The most desirable handcuff features were listed and categorized. The result is a handcuff unlike any other. The design introduces features, construction and materials that are innovative, real world and strong.

An optimized frame design was achieved through the use of sophisticated computerized engineering programs. Strength potential was maximized through the selection

of an optimal combination of materials, heat treatment, frame geometry and reinforcing ribs. The overmolded stainless steel frames of ASP Hinge Handcuffs flex to the side when improperly applied to reduce injury potential from excessive lateral stress.

The swivel has traditionally been the weakest part of any handcuff design. The Hinge cuff uses a pin and plate link to provide rigid frame alignment. The stainless steel links of ASP Hinge Handcuffs have a four point pivot structure to maximize handling characteristics.

STEEL HINGE | 56111

ALUMINUM HINGE | 56113

Aluminum handcuffs weigh 15% less than steel models and are distinguished by their black bows.

TACTICAL (1 PAWL)

ASP Tactical Handcuffs feature a replaceable Lock Set.

SECURITY (2 PAWL)*

The two pawl divider plate design is virtually impossible to pick.

DOUBLE CASE | 56160
SEE PAGES 52-55

LINEAR MOBILITY, PERMANENT COLOR

The patented design of ASP Chain and Hinge Handcuffs provides the safest restraint in the industry. The flat contact surface and smooth action prevents injury during application. All edges of the frame, cheek plate and bow are rounded to minimize the potential for nerve damage. The conical geometry of the cuff securely holds both small and large wrists. Flex Frame Technology reduces injury potential from excessive lateral stress due to improper handcuff application. The double lock indicator is highly visible. It is easily checked to assure activation. Cuffs that test too tight may be loosened and double locked without removing the key from the cuff. The interchangeable Lock Set may be upgraded to a three pawl European or two pawl High Security. The two-sided lock release is recessed and easily accessed without trauma to the subject. Both the single and double lock are released by turning the key in one direction.

IDENTIFIER CHAIN HANDCUFFS | 56180

IDENTIFIER HANDCUFF SERIES

Identifier Handcuffs are available in Chain or Hinge configurations. They add permanent color options to this world class design. Identifier colors will not crack, chip or fade. They are a structural component of the handcuff frame and will last the life of the cuff.

The Law Enforcement Series includes blue, brown and gray cuffs. The Corrections Series is offered in high visibility yellow, orange and pink. Custom colors are available with a minimum purchase of 1,000 handcuffs.

Identifier Handcuffs can readily distinguish the restraints of specific agencies or divisions. They may be used to designate the security threat or medical condition of a subject. They add the final level of safety to the most secure series of handcuffs on the market.

LINEAR AND LATERAL RIGIDITY

ASP Rigid Handcuffs may be used to control the most resistive subject. Their extension lock design provides a secure structure that allows an officer to stabilize without impact. The folding mechanism of the Rigid cuff permits the restraint to be easily carried, then automatically lock open to form a solid restraint. The Rigid configuration offers the most restrictive handcuff structure in the ASP Series. It removes both lateral and linear mobility. For this reason, Rigid cuffs are ideal for courtroom or airline restraint.

RIGID HANDCUFFS

- A** High Carbon Steel
- B** Hardened Stainless Steel Core
- C** Polymer Overmold
- D** Key Released Locking Block

RIGID HANDCUFF SERIES

ASP Rigid Handcuffs feature a locking bridge in the center of an ergonomic palm swell. Orientation disks confirm proper positioning. Raised for right-hand officers, lowered for left. The recessed finger track and contoured hand guard maintain a clear path to the bow guides. As with all ASP Handcuffs, the Rigid design incorporates a one piece unitized stainless steel frame. Cuffs are overmolded with high strength polymer. They have dual keyways and a high visibility double lock indicator.

The high contact conical bows have radiused edges. This design increases the range of adjustment for both large and small wrists. The lock action is extremely smooth, yet positive. Both double and single locks are released by turning the key in a single direction toward the bow. Flex Frame Technology reduces injury potential from excessive lateral stress. Thin. Lightweight. ASP Rigid Handcuffs. Providing officers with a new hold on control.

STEEL RIGID | 56121

ALUMINUM RIGID | 56123

Aluminum handcuffs weigh 15% less than steel models and are distinguished by their black bows.

TACTICAL (1 PAWL)

ASP Tactical Handcuffs feature a replaceable Lock Set.

SECURITY (2 PAWL)*

The two pawl divider plate design is virtually impossible to pick.

** Provided with proprietary handcuff key.*

EUROPEAN (3 PAWL)

Three independent pawls provide an extra measure of security against shimming.

CLASSIC CARRIERS WITH A HIDDEN ADVANTAGE

ASP Handcuff Cases are a benchmark blend of the finest materials in a series of clean, functional designs. Each case incorporates an integral back pocket and auxiliary handcuff key. Duty, Double and Federal carriers are available in Black Basketweave, Ballistic and ASPtec.

Duty and Federal cases are produced using inset construction. Double and Combination carriers have elastic side walls. Tactical carriers are constructed from ballistic nylon and incorporate a Velcro flap.

Investigator and Combo cases in Black and Ballistic are concealable and attach rapidly to the belt with one-direction snaps. Combo carriers retain a Tactical Baton or LED flashlight with Chain or Hinge Handcuffs.

- A** Secure Cuff Retention
- B** Durable Case Finish
- C** Spare Pentagon Key
- D** Concealed Key Pocket

HANDCUFF CASES

DOUBLE HANDCUFF CASE | 56160

HANDCUFF CASES

All ASP handcuff carriers provide secure retention of an emergency key for the officer. The key pocket is placed out of sight on the back of the case. The distinctive

forged ASP Pentagon Handcuff Key is concealed from the public, yet easily accessible to the officer. It is not tied to the operator or the equipment.

DUTY | 56131

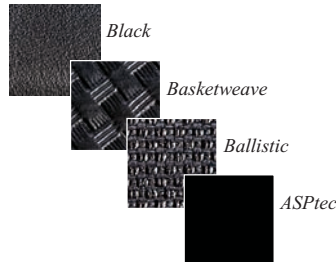

DUTY handcuff cases incorporate a key pocket and are constructed with an inset back, protective cover and snap closure.

DOUBLE

cuff cases secure restraints with a protective Velcro cover and elastic side wall technology.

DOUBLE | 56160

FEDERAL | 56138

FEDERAL cuff carriers have an inset back and pull through retention strap.

INVESTIGATOR | 56134

INVESTIGATOR cuff cases are compact and concealable. Designed for non-duty belts.

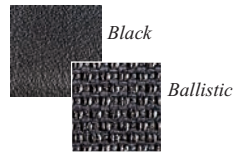

TACTICAL | 56136

TACTICAL
handcuff cases retain ASP restraints with an adjustable Velcro flap.

COMBO

cases place two essential tactical tools (Handcuffs and Baton or LED Light) conveniently at hand.

AS TOUGH AS THE JOB

ASP Handcuff Keys are designed to withstand the rigors of long term duty use. Conventional keys are stamped from mild steel. They often break or twist off in a handcuff. These “key jammed” restraints create civil liability and must be destroyed to cut them from the subject’s wrist.

Each ASP Key is hammer forged, then precision machined from stainless steel. The keys are heat treated for strength, then finished in one of five attractive coatings. A hardcoat lacquer is baked on for added protection. The unique ASP BackSet feature allows rapid location of the handcuff keyway.

Logo Keys feature distinctive Prestige insignias, full color State Seals or custom agency logos.

- A** Protective Keyring Swivel
- B** Recessed Logo
- C** Heat Treated Stainless Steel
- D** BackSet Lock Release

PENTAGON KEY (12) | 56523

HANDCUFF KEYS

GUARDIAN 1 (G1) | 56361

UNIVERSAL KEY SERIES

ASP stainless steel handcuff keys are precisely machined for a universal fit, then heat treated for strength. The BackSet tab facilitates rapid location of the keyway . . . even in the dark.

Most handcuff keys are stamped from mild steel. As a result, they twist off easily in handcuffs. They break when subjected to lateral pressure by a resisting subject. ASP heat treated handcuff keys are corrosion resistant and extremely durable.

Guardian Logo Keys incorporate State Seals and military insignias. They identify levels of certification and special units. Stock insignias include the seals of all 50

states. ASP Eagle, Strike Force, Police, Sheriff, Security, Tactical, K9, US military and Great Seal logos are also available.

The ASP Custom Logo program allows die struck medallions to be fabricated for a specific agency or unit. As few as 25 insignias can be die struck. Insignias can be inset into Guardian 1 or Guardian 2 Handcuff Keys in Black Chrome, Stainless, Gold, Antique Copper or Antique Brass.

GUARDIAN 1 (G1) | 56772

GUARDIAN 2 (G2) | 56689

PRESTIGE LOGOS

Fold out the back cover. Combine the first three numbers of the selected Baton Cap with the two numbers of the desired Prestige Logo.

CUSTOM LOGOS

Distinctive insignias are available in Brass, Nickel Silver or color fill. They may be die struck on request for individual agencies or divisions. Custom logos are available with an order for 25 Guardian Keys or Logo Caps (see Pages 22-23).

GUARDIAN 1 (G1)

CLIP | 56250

SWIVEL | 56252

SINGLE USE SECURITY

Tri-Fold disposable restraints are the most compact, easily carried and rapidly applied single use restraint on the market. Specifically designed to law enforcement standards, their wide, brightly colored straps have no sharp edges.

Tri-Folds are the first choice of US military and police rapid response teams. They carry and store smaller, yet open larger than other disposable restraints on the market. Their incredibly smooth, single tooth pull simultaneously tightens both straps. The Tri-Fold is stronger, more pick resistant and easier to remove than any other disposable restraint. The recessed identification plate has a textured writing surface.

The Tri-Fold hinge provides ergonomically correct restraint of a subject. It improves both control and comfort. The hinge increases strength of the Tri-Fold by realigning the angle of stress.

- A** Detachable Pull Ring
- B** Retaining Block
- C** Folding Hinge
- D** Fine Locking Teeth

TRI-FOLD RESTRAINTS

YELLOW TRI-FOLD | 56190
(6-PAK)

TRI-FOLD RESTRAINT SYSTEM

Tri-Fold disposable restraints incorporate a revolutionary new twin strap design. A patented Retaining Block completely surrounds the ratchet mechanism of each restraint. The reinforcement provides protection against shimming. The design also makes it physically impossible to “pull through” the locking ratchet as is possible on other double restraints.

Each Tri-Fold strap folds in three locations for compact storage. The straps are .5" wide with rounded edges to protect the subject's wrists. The Roller Loc design provides an incredibly smooth pull during application. As resistance is applied, additional ratchet teeth roll into place to secure the straps into the Retaining Block. The diamond configuration of expanded Tri-Fold straps

provide large pre-formed loops. Once expanded, the straps can be rapidly applied. The design allows both restraints to be pulled simultaneously with the reusable pull ring.

The end of each Tri-Fold strap incorporates a recessed identification plate. Tri-Folds can be pre-marked with a report number or used to identify specific subjects during a mass arrest.

Tri-Fold straps may be opened for use and returned to a folded position for storage. However, once they have been pulled past the recessed identification plate and the teeth engage the locking ratchet, it is not possible to retract the straps for storage.

TRAINING

FOR THE STREET

68 BATONS & BAGS

70 RESTRAINTS

74 RED GUNS

78 SUPPORT

SAFE TRAINING

The intensity of police training demands equipment as specialized as the skills to be learned. Each item in the ASP Training Collection has been designed to create a safe training environment while preparing officers for the reality of the street.

A **MICRO VENTS**
Die cut perforations allow air to escape and prevent the seams of the strike bag from blowing open during repeated impact.

B **IDENTIFICATION**
Placement of the Strike Force logo provides an index during drills. The ASP Logo identifies left-handed students.

C **FOAM BODY**
A precise density protects the officer while developing a tolerance for full contact impact.

D **OUTER COVER**
Liquid urethane is poured over a woven mesh of high strength nylon to create a surface that can withstand repeated impact from tactical batons.

E **STRAPPING**
Reinforced webbing provides firm yet flexible control of the bag.

TRAIN TO SURVIVE

The ability to employ force to control a confrontation is a critical law enforcement skill. ASP Training Batons and Bags allow officers to master impact and restraint techniques while preparing for the reality of the street. The designs facilitate progressive instruction and high level simulations while maintaining a safe training environment.

A NEW LOCK ON CONTROL

Handcuff Training requires repetition to master basic skills. The design of the ASP Training Cuffs permits field quality restraints to be applied exactly as on the street. However, the Lock Set of these handcuffs allows the student to rapidly remove the cuffs by simply rolling their wrists.

Training restraints dramatically increase the number of possible training sequences. When the cuffs are double locked, standard uncuffing techniques can be trained. To assure identification as Training Handcuffs, both the restraints and the Lock Sets are color coded red.

TRAINING RESTRAINTS

- A** Identical Function
- B** Slip Release Pawls
- C** Red Training Identification
- D** Actual Operational Weight

EP/NQ

TRAINING RESTRAINTS

All ASP Training Restraints are identical to their operational counterparts. They can be cased, carried and presented in the same manner as their tactical twin.

Red Training Chain, Hinge, Rigid and Tri-Fold Restraints are applied using the same Rock & Lock handcuffing procedure. They may then be rapidly removed using the Rotary Release technique. Training Restraint pawls are designed to disengage when subjected to continuous back pressure. The handcuffed student need only roll the wrists to release the cuffs.

Training Cuffs may also be double locked. Once the secondary lock is activated, hard cuffs can only be

removed by using a key to release the pawl. This design feature allows progressive restraint training.

During ASP Handcuff Training, students initially apply restraints to Training Batons and remove the cuffs by sliding them off. Next, students apply restraints to other trainees, having the subject remove the cuffs by rotating their wrists. Finally, hard cuffs are applied and double locked. Double and single locks are released with a key that is turned in the direction of the bow. This progressive training system maximizes restraint application while allowing officers to practice all components of the handcuff skill set.

SAFE, VISIBLE AND REALISTIC

The police firearm is an officer's most distinctive piece of service equipment. Each year a significant number of law enforcement personnel are shot with their own weapons. Weapon retention training as well as weapon disarming procedures are critical law enforcement skills. In addition, police personnel must learn to routinely carry firearms and master the safe handling of weapons under stress. Officers must acquire weapon safety skills for use while moving, when searching and during room clearance procedures. Red Guns provide rugged, lightweight training replicas that are precisely detailed to create a safe training environment. They provide a safe means of training law enforcement personnel to handle, transport, retain and present firearms.

RED GUNS

- A** Injection Molded Rail
- B** Metal Interior Reinforcement
- C** Reinforced Trigger
- D** Red Training Identification

RED GUN SERIES

All too frequently, law enforcement officers have been killed in a training environment with “unloaded” firearms. Red handled weapons can be confused with live firearms when held in the hand. Aluminum castings are heavy and cannot be distinguished from stainless weapons at a distance. The Red Gun Series is lightweight and readily identified as a training weapon. In addition, the extreme detail and precision manufacture of these training devices allows their use in weapon retention and holster security drills. The red polymer and the manner in which they are reinforced allows them to withstand the daily abuses of the training environment.

The Red Gun Series is ideal for all types of scenario training. The precision fit allows their use with duty holsters. Red Radios and Flashlights are valuable additions to sudden assault training on the firing line. The flexible Red Knife allows officers to rehearse responses to edged weapon attacks. The Red Gun Series can also be specially produced to the exact weight of a loaded duty firearm.

88 STREET DEFENDERS

90 TACTICAL DEFENDER

92 SUPPORT

SELECT YOUR OC DEFENDER

Traditional chemical irritants are little more than specially loaded spray cans. ASP Defenders were specifically designed as a dispersion system for chemical irritants. Rather than filling a standard aerosol can with Oleoresin Capsicum, Defenders incorporate a proprietary container, specially produced valve system and patented dispensing mechanism. They are precision machined from aerospace aluminum and solid brass. The entire unit is o-ring sealed.

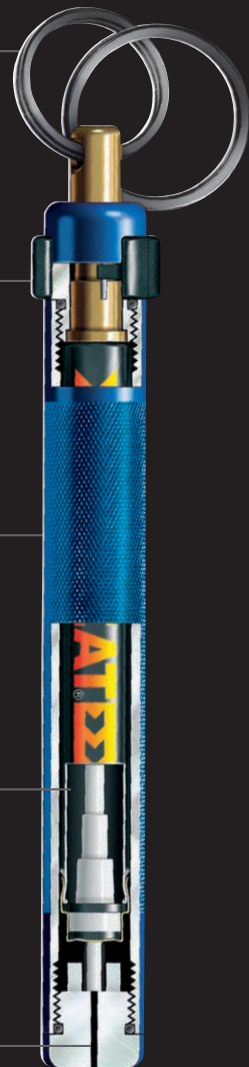

A **SPLIT RINGS**
Heat treated and black chrome plated nesting rings provide secure retention of keys.

B **SAFETY**
The thumb released wraparound design of the Defender safety requires two separate and distinct operations to release and activate the unit.

C **COATING**
The use of bright dip architectural anodizing, matte black hardcoat and electroless nickel plating assures the durability of each Defender.

D **INSERT**
Defenders use proprietary replaceable Inserts that were designed by ASP to provide straight line dispersion of Heat (OC) or Test (Inert).

E **DISPERSION TIP**
An extremely precise aperture that controls the pattern of OC.

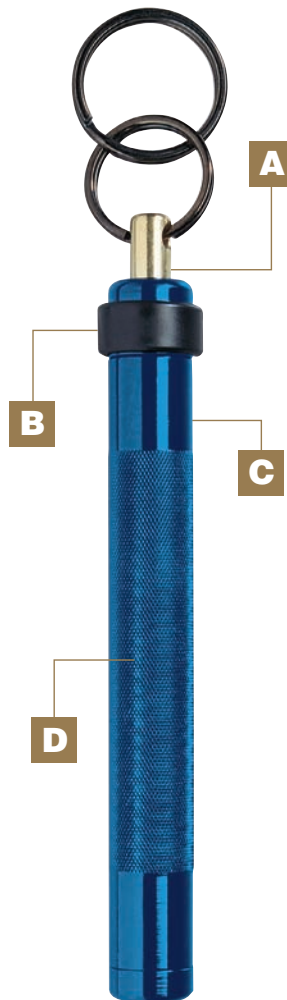

KEYRING PROTECTION

The ASP Defender Series is precision machined from high strength aerospace aluminum. They are lightweight, low profile, easily carried and devastatingly effective. Bright dip industrial anodizing is accented by an injection molded Delrin safety. The solid brass keyring swivel retains two heat treated, black chrome plated split rings. Both the dispersion tip and retention cap are o-ring sealed. The safety is positive and secure. Release requires two distinct movements. Straight line activation places a cone-shaped spray on target, even in the dark. Heat (OC) provides two million Scoville Heat Units of Oleoresin Capsicum protection. Test (Inert) Inserts allow safe training.

PERSONAL DEFENDERS

KEY DEFENDER | 55150

PERSONAL DEFENDER SERIES

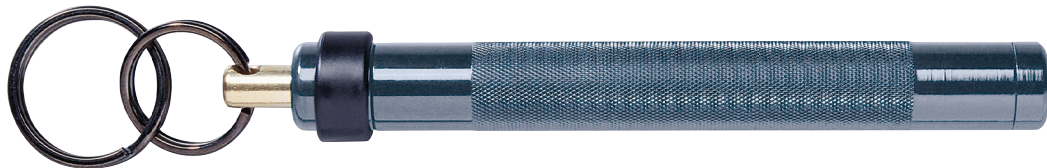

Personal Defenders eliminate the likelihood of accidental OC discharge. The horizontal firing system combined with a wraparound safety and thumb activated brass swivel preclude unintended activation.

Discharging the system requires two separate and distinct operations to disengage the safety and activate the Insert.

Personal Defenders are available in six anodized colors, electroless nickel plating and matte black texture. Both Palm and Key Defenders have solid brass swivel activators, wraparound Delrin safeties and heat treated black chrome split rings. Heat (OC) and Test (Inert) Inserts are replaceable.

EASILY CARRIED, READILY DEPLOYED

The Tactical Defender places two inconspicuous levels of force in an officer's hand. Acceleration from pain compliance with OC to impact with the ASP Baton is rapid and effortless. Holding the Defender in the traditional ready position, the safety may be pushed off and the OC activated or the baton expanded.

The Defender attaches to any Tactical Baton. The safety requires two distinct movements for activation. The system can use its own Inserts or Palm Defender canisters by means of a conversion tube. The Tactical Defender may be used with or without an attached baton.

POCKET SIZED ILLUMINATION

ASP was an early pioneer in handheld LED lighting. ASP lights are blindingly bright. They combine innovative design with world class craftsmanship. The result is unparalleled performance and uncompromising reliability.

- A **LENS**
Injection molded water clear polycarbonate is virtually indestructible under the most severe tactical conditions.
- B **REFLECTOR**
Gasket sealed parabolics are vacuum plated for increased reflectivity.
- C **CELLS**
CR123A Lithium primary cells include a positive temperature coefficient (PTC) current and thermal protective circuit.
- D **GRIP**
Seamless foamed vinyl grip is both durable and heat resistive.
- E **SWITCH**
Three position rotary control provides intermittent, locking and constant function activation.

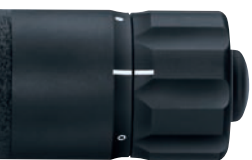

A NEW STANDARD IN BRIGHTNESS

ASP Triads provide incredible brightness in a small format. The smart chip technology of Triad lights automatically recognizes battery strength and adjusts the driver to compensate for any increase or decrease in voltage. The lights maintain a consistently brilliant beam. Their three position rotary collar locks the light, provides intermittent illumination or allows constant-on activation. The Lithium power cells have a ten year shelf life. The self-contained Parabolic Reflector Assembly is metalized and gasket sealed. The independent focusing elements create a room illuminating halo as well as a penetrating central beam of incredible brightness.

TRIAD SERIES

ASP flashlights are designed to professional law enforcement standards. They have gained a worldwide reputation for performance. The Triad Series presents a new generation of high intensity LED lights from ASP.

Each Triad is precision machined from high strength aerospace aluminum. A satin black hardcoat finish is accented by an extremely durable foamed vinyl grip.

The Triad Activation System is sensitive and quiet. The rear mounted switch provides universal orientation when

grasping the light. The overmolded activation button is always under the thumb. The three position rotary collar is positive and direct. In the centermost position, the switch is locked off. The collar is rotated to the right for constant-on. To the left for intermittent light.

Each Triad combines the innovative design and unparalleled manufacturing expertise of ASP. O-ring sealed for water resistance. Performance tested under the most severe conditions. Triad lights are unmatched in function and durability.

TRIAD | 35623

The foundation of the Triad product line. A one LED, two power cell light that pushes the limits of tactical performance. Integral heat dispersion fins combine with a foamed vinyl insulation grip. A professional quality,

aerospace aluminum body incorporates a matte black hardcoat anodized finish. Brilliant white illumination with features that are unmatched in the industry. The new base line standard for law enforcement illumination.

TRIAD EXPRESS | 35624

The Express adds an optional red or blue illuminating LED to the brilliant white beam of the Triad platform. Here is the same foamed vinyl grip, three position rotary lock switch, aerospace aluminum body and matte black hardcoat anodized frame that are standard on all Triad lights. The rotating collar allows an officer to select a soft night vision saving red or high contrast blue flood. These

auxiliary LEDs are ideal in situations where the room filling power of the Triad white beam is not appropriate. Separating light selection from switching simplifies light control. It makes Triad operation more intuitive. The revolutionary system allows each light source to be controlled in exactly the same manner.

TRIAD ELITE 3 | 35621

Having set the world standard for brightness, the two or three cell Triad Elite remains the illumination master of the law enforcement profession. When only the brightest will do, only the Elite will meet the spec.

The Elite begins with a selection of LEDs from the very top of the brightness bins. Then ASP specifies a chromaticity range of pure white light that is available from

only a fraction of the LEDs produced in the world. Three of these very special and extremely costly LEDs are placed in a unique reflector. The light is driven with custom software. A proprietary operating system to manage the incredible heat that is generated. The result is a light like no other. Performance unmatched by any handheld primary cell light in the world. The Triad Elite.

MINIMUM FORM,
MAXIMUM FUNCTION

The Tungsten LED is small, powerful and incredibly bright. It combines a distinctive profile with a no compromise standard of quality. The reduced form factor of the Tungsten LED is made possible by a revolutionary new light engine. ASP research developed a unique technology which produces an incredible beam of brilliant white pre-focused light. A constant current driver is combined with a mathematically precise collimating cone to achieve unparalleled output. Advanced optics are coupled with a precision machined high strength aerospace aluminum housing. All surfaces are then anodized with a proprietary satin black hardcoat finish.

A center locking position guards against accidental activation of the Tungsten. Turned to the right, the switch provides constant illumination. To the left, activation is intermittent. A removable clasp allows the Tungsten to be carried in a belt case or clipped to a pocket.

LIGHT CASES

The carrier for a duty LED is often as important as the light itself. The case must secure, protect and readily present the duty light. Each ASP holder provides a unique blend of protection and ease of presentation.

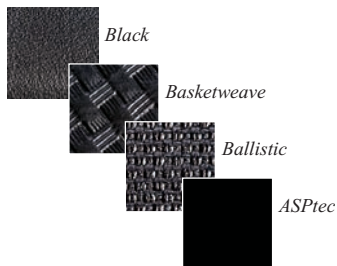

Under the most challenging field conditions, ASP carriers secure your light while providing instant access to meet any tactical need.

LIGHT CELLS

ASP CR123A Lithium power cells incorporate a Positive Thermal Coefficient (PTC) protection circuit and pressure relief vent.

POWER CELLS (2) | 53023

ASP Battery Sticks are easily carried and rapidly replaced. They consist of two welded PTC protected CR123A Lithium power cells.

BATTERY STICK | 03027

Twelve premium quality CR123A power cells are conveniently boxed for storage or transport.

BATTERY BOX (12) | 03028

COMBINED BRILLIANCE

The Tactical Triad was specifically designed for use with ASP Expandable Batons. It is compact, rugged and incredibly bright. Precision machined from high strength aerospace aluminum, the light is anodized with a proprietary satin black hardcoat finish. The Tactical Triad is accented by an extremely durable foamed vinyl grip. It is powered by a leak proof CR123A Lithium battery with a 10 year shelf life.

The Tactical Triad can be attached to any of the three million ASP Tactical Batons in operation worldwide. Its rotary switch is positive, yet secure from accidental activation. The metalized parabolic reflector produces a brilliant white penetrating beam of incredible brightness. The Tactical Triad may be used with or without an attached baton.

THE PERSONAL LED

ASP Wearable Lights introduce a new technology to personal lighting products. They are bright, reliable and conveniently clipped. Shockproof Wearable Lights will become your constant companion. A Lifetime of Light . . . where and when you need them.

The Lifetime Crystal produces a high efficiency, non-deteriorating solid state beam. It provides soft illumination with a 180° viewing radius.

- A** Nichia High Intensity LED

- C** Forged Aluminum Panels
- D** Integral Keyring Clip

WEARABLES

SAPPHIRE | 53750

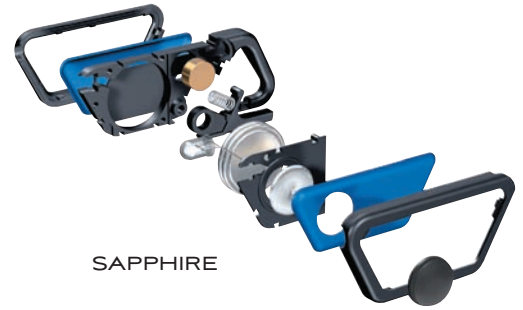

THE ALUMINUM SERIES

The forged aluminum panels of ASP Wearable Lights encase a new technology in personal lighting. A high efficiency, brilliant white, non-deteriorating, solid state beam. Lithium batteries with a ten year shelf life. The intermittent Sapphire is guaranteed for life. The constant-on Elite comes with a replaceable battery pak.

POWERPAK (BLACK) | 52680

SAPPHIRE

THE TRANSLUCENT SERIES

The translucent panels of these ASP lights are molded from water clear polycarbonate. They retain the brilliance and reliability of their aluminum panel counterparts. Brilliant white LEDs provide a solid state beam. Lithium primary cells assure continuous power. The intermittent Mirage is guaranteed for life. The constant-on Ice employs a replaceable battery pak.

POWERPAK (CLEAR) | 53980

ICE

THE PATRIOT SERIES

In the history of the men and women who protect and serve this nation are stories of incredible personal sacrifice and valor. It is this spirit of commitment and selflessness that are symbolized by the Patriot Series.

The Patriot was the first ASP Wearable Light to employ ChromaColor. This striking new process fuses rich colors into the pores of aerospace aluminum. The vibrant pigments are as durable as the forged metal panels that they become a part of.

Each Patriot light incorporates a white LED and Lithium power cells that are guaranteed for life.

CUSTOMIZATION

MAKE IT YOUR OWN

The customization labs at ASP offer a series of unique product identification processes. Old world craftsmanship is combined with the latest computer technologies to provide a range of options for individuals, divisions and agencies. Exclusive marks of distinction.

LASER ENGRAVING

Custom German optics. A precision focused beam. The most advanced computer graphics. ASP laser engraving stands above all others. Highly skilled technicians. A laser lab that produces images of incredible detail. These are impressions of unmatched quality.

Digital technology directs the precision beam of the laser. A light so intense it vaporizes metal. A mark that is crisp, precise and permanent. This is the most sophisticated engraving technology available. Images of quality. Lasting impressions at the speed of light.

CHROMACOLOR

Forged aluminum panels. A mirror polished finish. Vivid designs. Bright, detailed logos. A proprietary coloration process. ChromaColor from ASP.

This is not a silk screen, foil stamp or pad print. Each custom shade of the ChromaColor process is embedded into the pores of the metal surface. These are designs that will not wear off. Logos that are color accurate and precise. Insignias as durable as the metal they are a part of.

EMBROIDERY

The finest computerized sewing technology. Precision stitching heads. The densest of thread counts. Embroidery at ASP is held to the highest Swiss standard of detail and design. Custom digitized insignias. Meticulously controlled thread counts. Rich, vivid colors. Each piece produced with award winning attention to detail by individuals who take as much pride in your logo as you do.

DIE STRIKING

In a world of mass production, these images are produced one at a time. In an age of photographic copies, these impressions are cut by hand. In a generation of painted imprints, these insignia are struck in high relief. Coined in nickel silver and jewelers bronze. Die struck with incredible detail. Three dimensional medallions of unsurpassed quality.

Each image is painstakingly cut by hand into a block of solid tool steel. Each line is chiseled and meticulously hand polished to create an image of distinction.
